

Rule: multiply by 10

Rule as an equation:  $10x = y$

x	y
2	20
4	40
6	60
8	80
10	100

$$10x = y$$

What is happening to the x to get the value for y?

Rule: divide by 5

Rule as an equation:  $\frac{x}{5} = y$

x	25	20	15	10
y	5	4	3	2
